

Vibrating Tables

Shake Your Way to More

Ship more bulk materials. Separate more parts. Test more products. NAVCO vibrating tables enable you to Get More Done!

Utilized Across Multiple Industries

Our tables are utilized across a wide range of industries. Including Agriculture, Energy, Construction, Pharmaceutical, Mining, Food Processing, Metal Manufacturing, and many more.

Power Options to Fit Your Work Flow

Available with electric or pneumatic drives. Allowing for easy integration into your production line.

Reliable, Field-Proven Industrial Design

Designed with minimal moving parts. Ensuring a long reliable operating life.

Good Vibrations

Applying too much or too little vibrational force or frequency can lead to loss of material or even damaged products. NAVCO fine-tunes the force and frequency output of our vibrating tables to your exact application.

Repeatable Quality

Whether it's making sure an ice cream tub is filled to the top or making sure the powdered material in a mold is the appropriate density, our vibrating tables take the guesswork out of making sure your product is the same every time.

Enhance Your Products & Work Flow:

Through the use of vibration, our tables automate labor intensive processes. This enables you to increase productivity and enhance the quality of your products.

Compacting Table

Increase the amount your containers hold. Decrease your shipping costs by maximizing load sizes.

Settling Table

Prevent peaks from building and slowing production by flattening material as it's loaded.

De-Aerating Table

Enhance product quality. De-aerate concrete molds and other cast materials, giving them improved structural integrity and quality.

Shake Out Table

Remove sand and debris from your foundry's processes.

Testing & Quality Assurance Table

Used for product quality and fatigue testing. Our vibrating tables ensure your products meet your customer's expectations.

and More...

NAVCO vibrating tables can be customized to handle other non-traditional applications.

Vibrating Tables

Vibration Technology for Processing Bulk Materials
Bulletin: 2000.302

Endlessly Customizable

In-house engineering and design teams provide customized vibration tables to meet your exact needs, making them easily integrated into your current work flow.

Production Team Player

Need to add a vibration table into your production line? NAVCO can build custom tables from the ground up. Our team of engineers will work closely with you to design a table that fits seamlessly into your process. This allows for reduced downtime and installation costs.

Application Specific Customization

Our engineers work with you to provide the application specific customizations needed to get the job done. These customizations include grid tops, loads cells, scales, containment rails, clamps, and more.

Standard Vibrating Tables Get You Up and Running Fast

Available in 48", 36", & 24" square sizes. Our standard vibrating tables are available with short lead times, allowing your project to get up and running fast!

48" Square Table

36" Square Table

24" Square Table
