

Hydraulic Truck Lift Vibrator Assembly

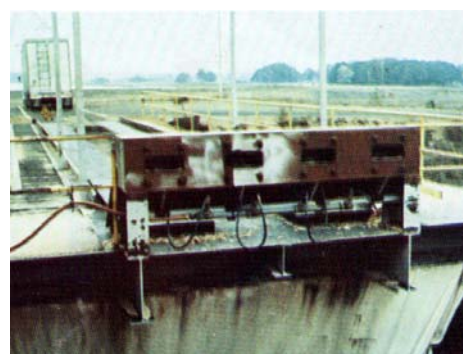

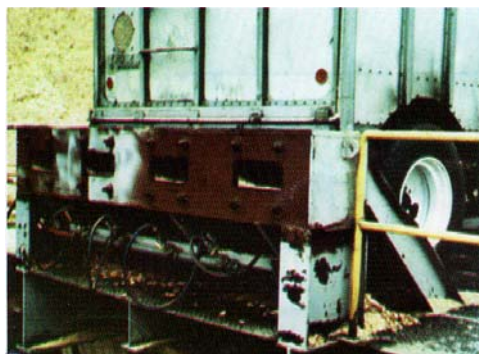

For Unloading Chip/Sawdust

The **NAVCO**[®] LC 313 is designed to facilitate unloading of wood chip trailers on hydraulic lifts. It is a heavy-duty unit designed for the most difficult unloading applications, initiating and maintaining material flow for the most stubborn material.

Reduce chip truck unloading time and costly “jolting” action with the NAVCO LC 313 vibrator assembly.

- Benefits:**
- ◆ Only slight modification of existing stop/bumper is required to incorporate the NAVCO LC313 vibrator assembly
 - ◆ Four NAVCO BH 4 inch long stroke impacting vibrators operate simultaneously to loosen packed material and allow continuous free flow.
 - ◆ The NAVCO LC 313 assembly eliminates operators from ‘jolting’ hydraulic platform lift cylinders, saving costly repairs.
 - ◆ Completely eliminates the need for manual shoveling of packed chips.
 - ◆ No need for personnel to enter truck trailers at any time.
 - ◆ Vibrator assembly is positioned completely on platform, always ready for the next truck.
